### **DETAILED ACTION**

This is the first action relating to serial application number 10/720,697 filed 11-25-2003.

Claims 1-18 are allowed.

#### ***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

#### ***Drawings***

2. The examiner has accepted the drawing filed with this application as formal drawing.

#### ***Allowable Subject Matter***

3. The following is an examiner's statement of reasons for allowance: the prior art fails to anticipate or render obvious the combination of a hydraulic control system for an automatic transmission as set forth in claims 1, and in claim 8, a method for hydraulically controlling an automatic transmission supplied with a hydraulic discharge, and most significantly claim 1 requires a pressure regulator means for regulating a hydraulic oil pressure downstream of the orifice, the pressure regulator means correcting the hydraulic oil pressure downstream of the orifice by adding a predetermined correction amount of hydraulic pressure for a first predetermined time when the stroke position determining means determines that the spool is displaced from the large stroke position to the small stroke position. Claim 8 requires correcting a hydraulic oil pressure downstream of the orifice of the flow rate control valve by adding

a predetermined correction amount of hydraulic pressure when it is determined that the first predetermined time has not elapsed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Takano et al. 94,782,934) a control system for controlling the speed of the drive pulley in relative to the speed of the engine. Fujimoto et al. (US 2003/0022742) discloses a control system for an automatic transmission by suing a regulative valve and a manual valve to switch a supply of the oil supply. Tanaka et al. (4,557,706) discloses a flow restrictor for restricting the oil flow discharge. Miyawaki et al. (6,514,175) discloses a control for CVT by using an oil regulative valve for controlling the hydraulic pressure. Taniguchi et al. US 2001/0044361) discloses an oil pressure detector for detecting the oil pressure and a learning detector and correcting instructions signals. JP (08-247242), JP (2002-340158) and JP (64-41431) disclose a method of controlling and correction the oil pressure.
